The German Research Center for Artificial Intelligence (DFKI) is the leading German research institute in the field of innovative software technology. For our research group „Intelligent Analytics for Massive Data - Smart Data“, led by Prof. Dr. Volker Markl, we are looking for a

**Software Engineer / Researcher**

to join our team at DFKI’s project office in Berlin.

You will work in an international team and contribute to research and development projects in the area of big data, data management, and data analytics.

We are looking for a candidate with a bachelor’s or master’s degree in computer science or a related discipline, excellent programming skills (Java or Scala), and experience in most of the following areas:

- Software development
- Database systems (SQL / NoSQL)
- Big data systems (MapReduce, Hadoop, Spark, GraphLab, Flink)
- Data analysis
- Machine learning
- Stream processing

Good communication and problem-solving skills are highly valued, as well as the ability to work independently and meet deadlines.

We offer:

- a motivating working environment
- interesting research topics
- flexible working hours
- competitive compensation

Please send your full electronic application (cover letter, CV, certificates, transcripts) to recruiting-iam@dfki.de until Nov. 15, 2016.

Please refer to the job opening „44-16/VM“ and include your earliest possible starting date.
